# SKETCHY ALIBIS

## ChatGPT Skills Used by Me

This is the list of skills that I inherited from the GitHub ECC and used to make the project.

### ecc-product-lens

**Product planning:** Used to define the game's direction, narrow the MVP, and maintain the four-player, single-case scope.

### ecc-product-capability

**Feature and requirements design:** Translating the game concept into player journeys, gameplay rules, and functional requirements, including roles, alibis, timed stages, evidence, verdicts, and scoring.

### ecc-search-first

**Research and technology selection:** Associated with researching implementation options and evaluating technical approaches before settling on the development stack.

### ecc-blueprint

**Project blueprint and architecture planning:** Used to structure the project plan, technical decisions, milestones, implementation tasks, and outstanding work.

### ecc-tdd-workflow

**Test-driven development:** Associated with implementing features alongside focused automated tests and using test results to guide changes.

### ecc-security-review

**Security review:** Associated with reviewing multiplayer boundaries such as room access, player identity, authorization, hidden-role information, and server-side game actions.

### ecc-e2e-testing

**End-to-end testing:** Associated with validating complete browser journeys, from creating and joining a room through playing and completing a case.

### Pages

**Documentation:** Used to create or maintain project specifications, planning notes, and supporting documentation.

### Council-ECC

**Decision support:** Used as a multi-perspective decision-support approach to consider alternatives and trade-offs during development.

### OpenAI Docs

**Documentation and workflow research:** Used to look up ChatGPT skill access and usage information while setting up the development workflow.
